# GLOBAL HIGH SCORE

## INTRODUCTION

With the Global High Score application, you will be able to store the scores of your players all over the world and show them. Therefore, players will compete and will constantly try to get better new scores in your game. This will increase the rating and popularity of your game.

Many games maintain a high score table that on game on that system. So, players do not know the other players points or scores. But the global high score produces a solution. All players will know scores each other. This system stores your data on the internet.

## FREQUENTLY ASKED QUESTION (FAQ)

1. What kind of hosting platform do I need?

Your hosting plans are including PHP and MySQL. (Maybe you can free hosting firms.)

2. I'm stuck and I need help, what can I do?

If you cannot find a solution for your problem in this documentation, contact me please! I'd gladly help to solve your issue.

3. I can't send or receive scores.

Please check internet connection and add the internet permissions to your game project.

Android users: You have to add this line:

```
<uses-permission android:name="android.permission.INTERNET" />
```

4. Does it matter Windows or Linux hosting?  
No, it doesn't.
5. What is the different updateScore and insertScore?

If you want to a score for each user, you should use updateScore. But you have to be sure the player has a score in your board. You can use this method for check

```
StartCoroutine (getPlayerScore (player));
```

And look this variable

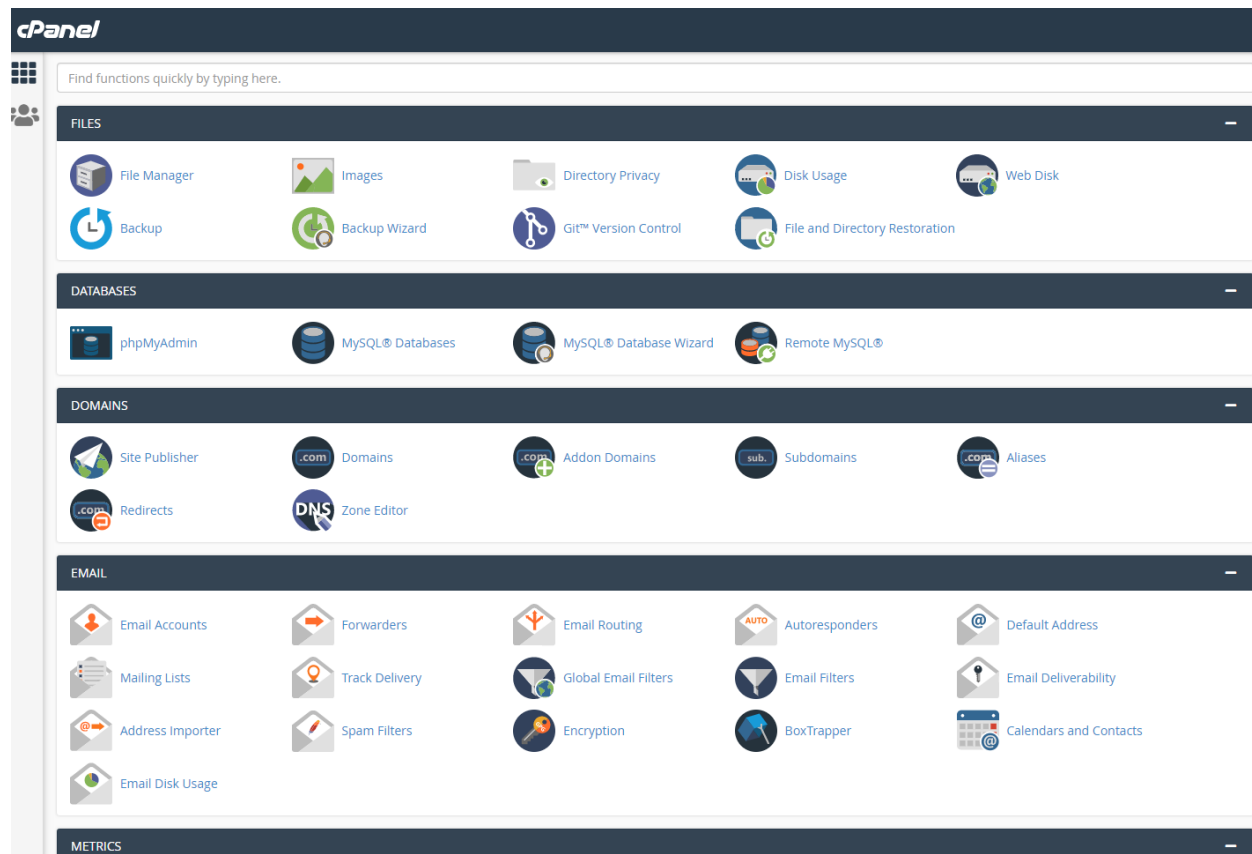

```
private string playerScore = "";
```

If playerScore == "" then call insertScore method but if you have a score call updateScore

## HOW TO CONFIGURE WEB SIDES

### UPLOAD PHP FILES:

1. Create a database and database user on hosting in the cPanel.

Push MySQL Database Wizard.

# MySQL® Database Wizard

MySQL Databases allow you to store lots of information in an easy to access manner. The databases themselves are like bulletin boards, content management systems, and others. To use a database, you'll need to create it. Only MySQL can write to that database.

## Step 1: Create A Database

New Database:

democom\_

sample

**Note:** 55 characters max.

Next Step

Write a database name (Ex: sample). Important note: Your database name is democom\_sample.

The next step is creating a database user:

# MySQL® Database Wizard

This feature is disabled in demo mode.

## Step 2: Create Database Users:

Username:

democom\_

**Note:** 8 characters max.

Password:

Password (Again):

Strength ⓘ

Very Weak (0/100)

Password Generator

Create User

[Go Back](#) [Go Back to the Main MySQL Page](#)

Please write a username.

Ex: user ame : alp (User: **democom\_alp**)

Password : 7yNLvr,jb1ZJ

Password (Again): 7yNLvr,jb1ZJ

**cPanel**

**MySQL® Database Wizard**

This feature is disabled in demo mode.

### Step 2: Create Database Users:

Username:

democom\_ alp

**Note:** 8 characters max.

Password:

\*\*\*

Password (Again):

Strength ⓘ

Very Weak (1/100)

Create User

Go Back Go Back

Close

7yNLvr,jb1ZJ

Generate Password

Advanced Options »

☐ I have copied this password in a safe place.

Use Password Cancel

Then push the "Create User" button. (Note I used password Generator button

### Step 2: Create Database Users:

Username:

democom\_ alp

**Note:** 8 characters max.

Password:

\*\*\*\*\*

Password (Again):

\*\*\*\*\*

Strength ⓘ

Very Strong (100/100)

Create User

Password Generator

The system is created strong password for me)

Now we have a database and database user with password. Please note all of it. We will use later. You can see how to on my YouTube channel. (<https://youtu.be/jXf2gGKKaEQ>)

2. We are creating a table for our scores. (Our table name is "scor\_board.")

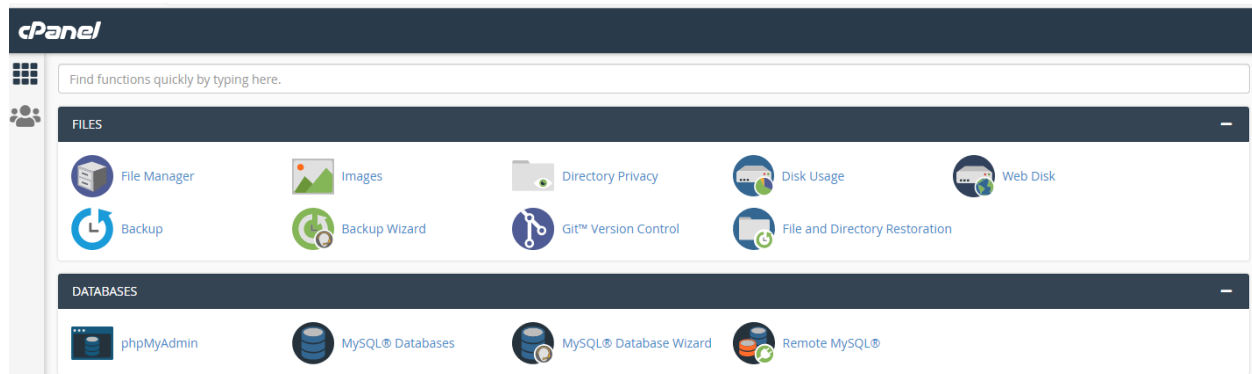

### First Way:

Open createtable.php from PHP folder with notepad. Then change the **yourdatabasename** as above. Save and upload your hosting. Then call from browser like this :

<http://www.yourdomain.com/createtable.php>

You will see "Table scor\_board created successfully".

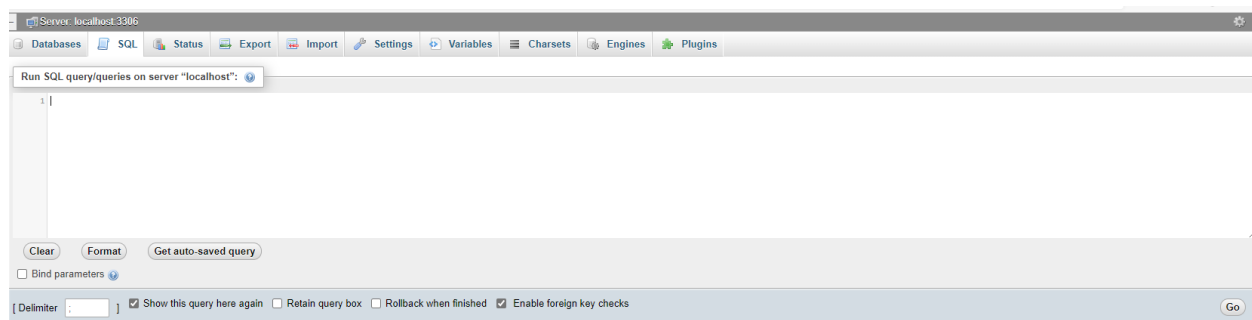

### Second Way: Select phpMyAdmin

Then select SQL tab.

### Select SQL

Then paste this script :

```
CREATE TABLE `yourdatabasename`.`scor_board` ( `id` INT NOT NULL AUTO_INCREMENT ,  
`player` VARCHAR(255) NOT NULL , `score` INT NOT NULL , `score_date` TIMESTAMP NULL ,  
PRIMARY KEY (`id`)) ENGINE = MyISAM;
```

and push "Go" button. Your table is created.

**Third way:** You can create table row by row. Your structure is look like this

#	Name	Type	Collation	Attributes	Null	Default	Comments	Extra	Action
<input type="checkbox"/>	1	id			No	None		AUTO_INCREMENT	Change  Drop  More
<input type="checkbox"/>	2	player	latin1_swedish_ci		No	None			Change  Drop  More
<input type="checkbox"/>	3	score			No	None			Change  Drop  More
<input type="checkbox"/>	4	score_date			Yes	current_timestamp()			Change  Drop  More

☐ Check all With selected: Browse Change Drop Primary Unique Index Fulltext Fulltext

Note: Also, you can use this documentation. <https://docs.cpanel.net/cpanel/databases/mysql-databases/>

- Now please open the connect.php file. You can use notepad, notepad++ etc programs. And fill on it with your notes.

```
$host = "localhost" or sometimes your database ip  
$dbname = "yourdatabasename"  
$dbusername = "yourdatabaseusername"  
$dbpassword = "yourdatabaseusernamepassword"
```

```
*connect.php - Notepad  
File Edit Format View Help  
<?php  
  
$host = "localhost";  
$dbname = "democom_sample";  
$dbusername = "democom_alp";  
$dbpassword = "7yNLvr,jb1ZJ";  
  
$connection = mysqli_connect($host, $dbusername, $dbpassword, $dbname);  
  
?>
```

- You must upload these PHP files to your host. If you have uploaded files in a folder, please note this. (ex: ...\\score\\) You can do this by any ftp programs(such as Filezilla) or webFTP.

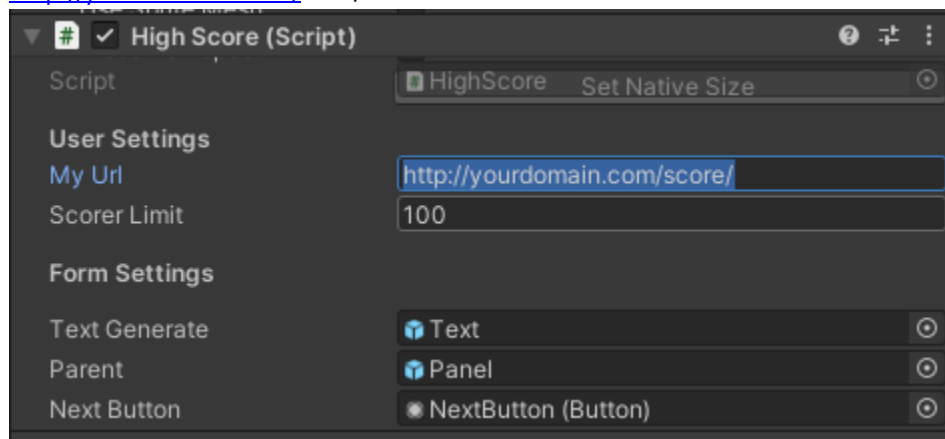

Name

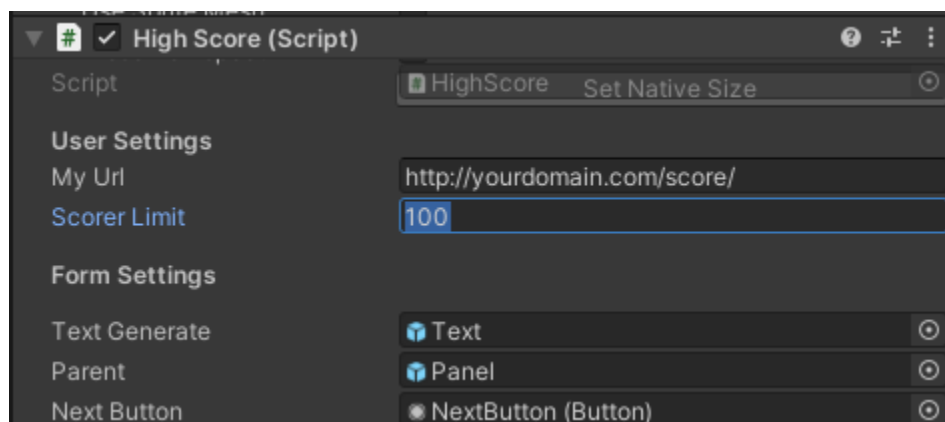

connect.php  
delete.php  
insert.php  
select.php

## UNITY ENGINE SIDE:

1. Unity Engine side is so simple. Please write your uploaded files directory in My Url. (Ex: <http://yourdomain.com/xxxx/> .

2. You can set your score board limit. Scorer Limit : X

## HOW TO USE HIGH SCORE

### SAVE SCORE:

You have to use the `InsertScore(string player, int score)` method in `HighScore.cs`.

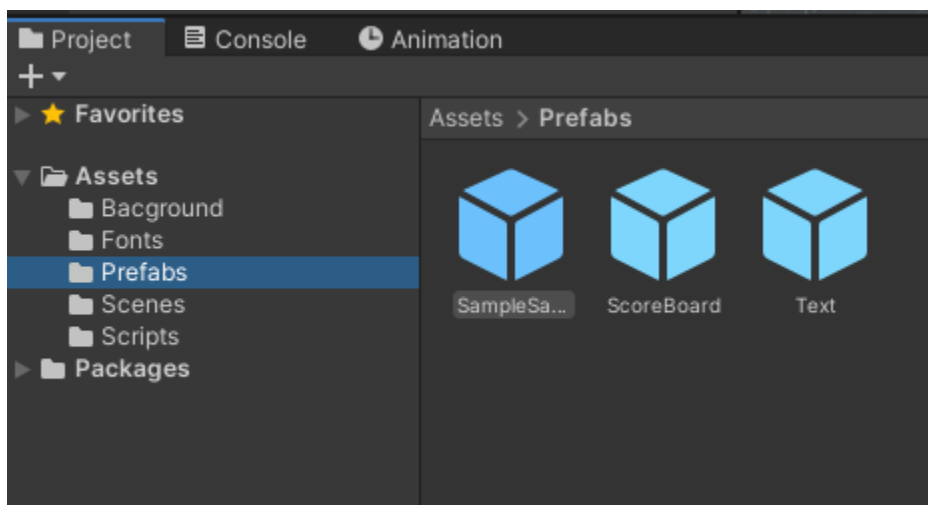

```
IEnumerator InsertScore (string player, int score)
```

Example is how to use it:

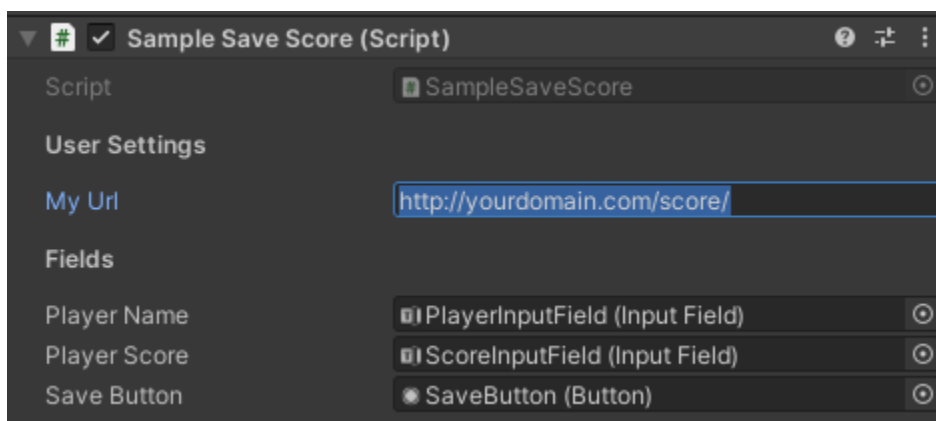

```
StartCoroutine (InsertScore ("Rob", 15000));
```

This method parameters are player and score. Player is player's name; player's score is game score.

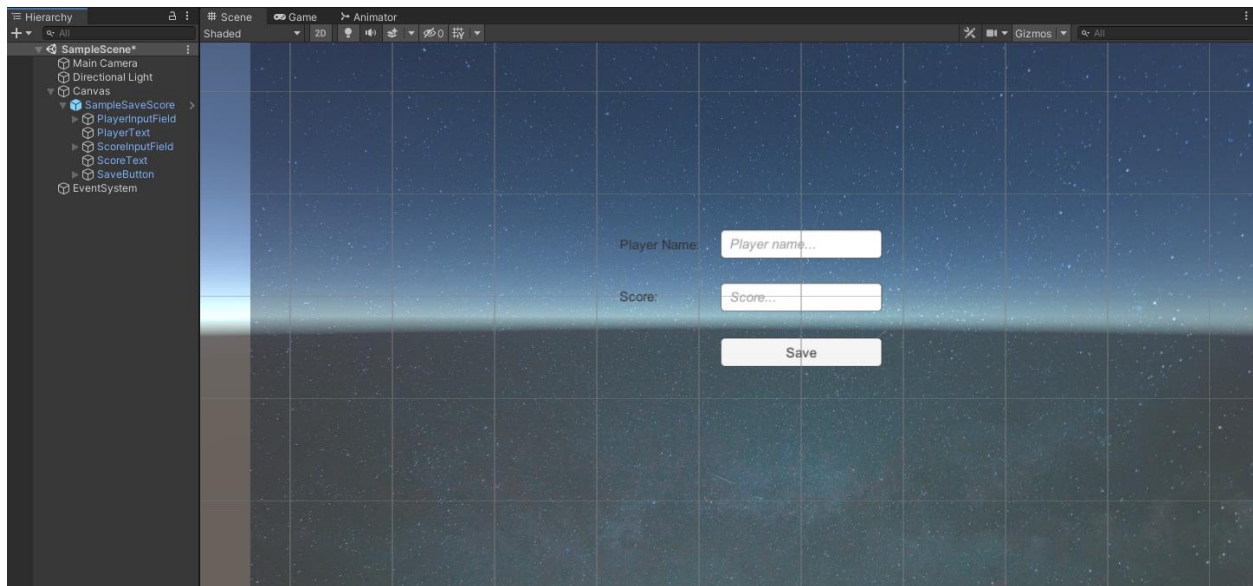

You can take advantage of this prefabs: **SampleSaveScore**

Don't forget set the your url:

Now you can use:

## UPDATE SCORE:

If you want to unique score for any user, you have to this method.

```
IEnumerator UpdateScore (string player, int score)
```

Example is how to use it:

```
StartCoroutine (UpdateScore ("Adrian", 17000));
```

## VIEW SCORE:

If you have any high scores in your database, you should see this result.

A screenshot of a 'HIGH SCORE' table. The title 'HIGH SCORE' is centered at the top in large white letters. Below it is a table with 10 rows, each representing a player's score. The table has three columns: a rank number, a player name, and a score. The scores are displayed in yellow text. At the bottom of the table are four navigation buttons: 'First', 'Prev', 'Next', and 'Last'.

1	Steve	20000
2	Rob	15000
3	Adrian	7000
4	Dave	5000
5	Glenn	4000
6	Scott	3000
7	Nico	3000
8	Bruce	2000
9	Ian	1500
10	Janick	1000

First Prev Next Last

A screenshot of a 'HIGH SCORE' table. The title 'HIGH SCORE' is centered at the top in large white letters. Below it is a table with 2 rows, each representing a player's score. The table has three columns: a rank number, a player name, and a score. The scores are displayed in yellow text. At the bottom of the table are four navigation buttons: 'First', 'Prev', 'Next', and 'Last'.

11	Richie	300
12	Blaze	50

First Prev Next Last

You can navigate your scores . For this you can use "Next", "Last", "Prev" and "First" buttons.

### DELETE SCORES:

You can delete all scores from your system. Please call this methods

```
IEnumerator DeleteScore (){
```

Example is how to use it:

```
StartCoroutine (DeleteScore ());
```

Please use carefully this method, because delete all of them.

### GET PLAYER SCORE:

You can get the player's score with this method.

```
IEnumerator getPlayerScore (string player)
```

Then please check this variable.

```
playerScore
```

Example is how to use it:

```
StartCoroutine (getPlayerScore ("Adrian"));
```

### GET PLAYER RANK:

You can get the player's rank with this method.

```
IEnumerator getPlayerRank (string player)
```

Then please check this variable.

```
playerRank
```

Example is how to use it:

```
StartCoroutine (getPlayerRank ("Adrian"));
```

### PLAYER IS EXIST:

With this method, you can find out if the user exists.

```
IEnumerator getPlayerisExist (string player)
```

Then please check this variable.

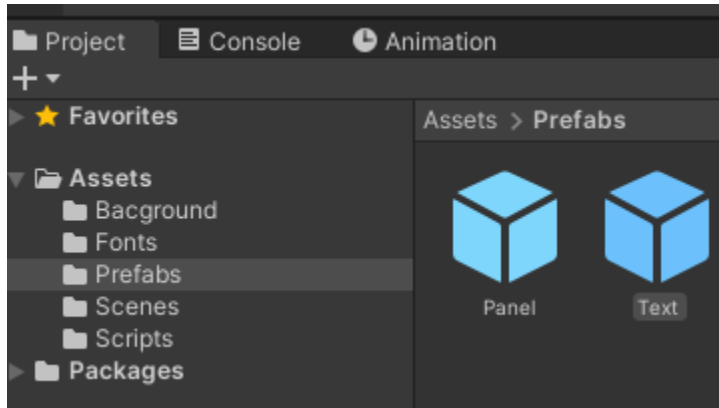

```
isExist
```

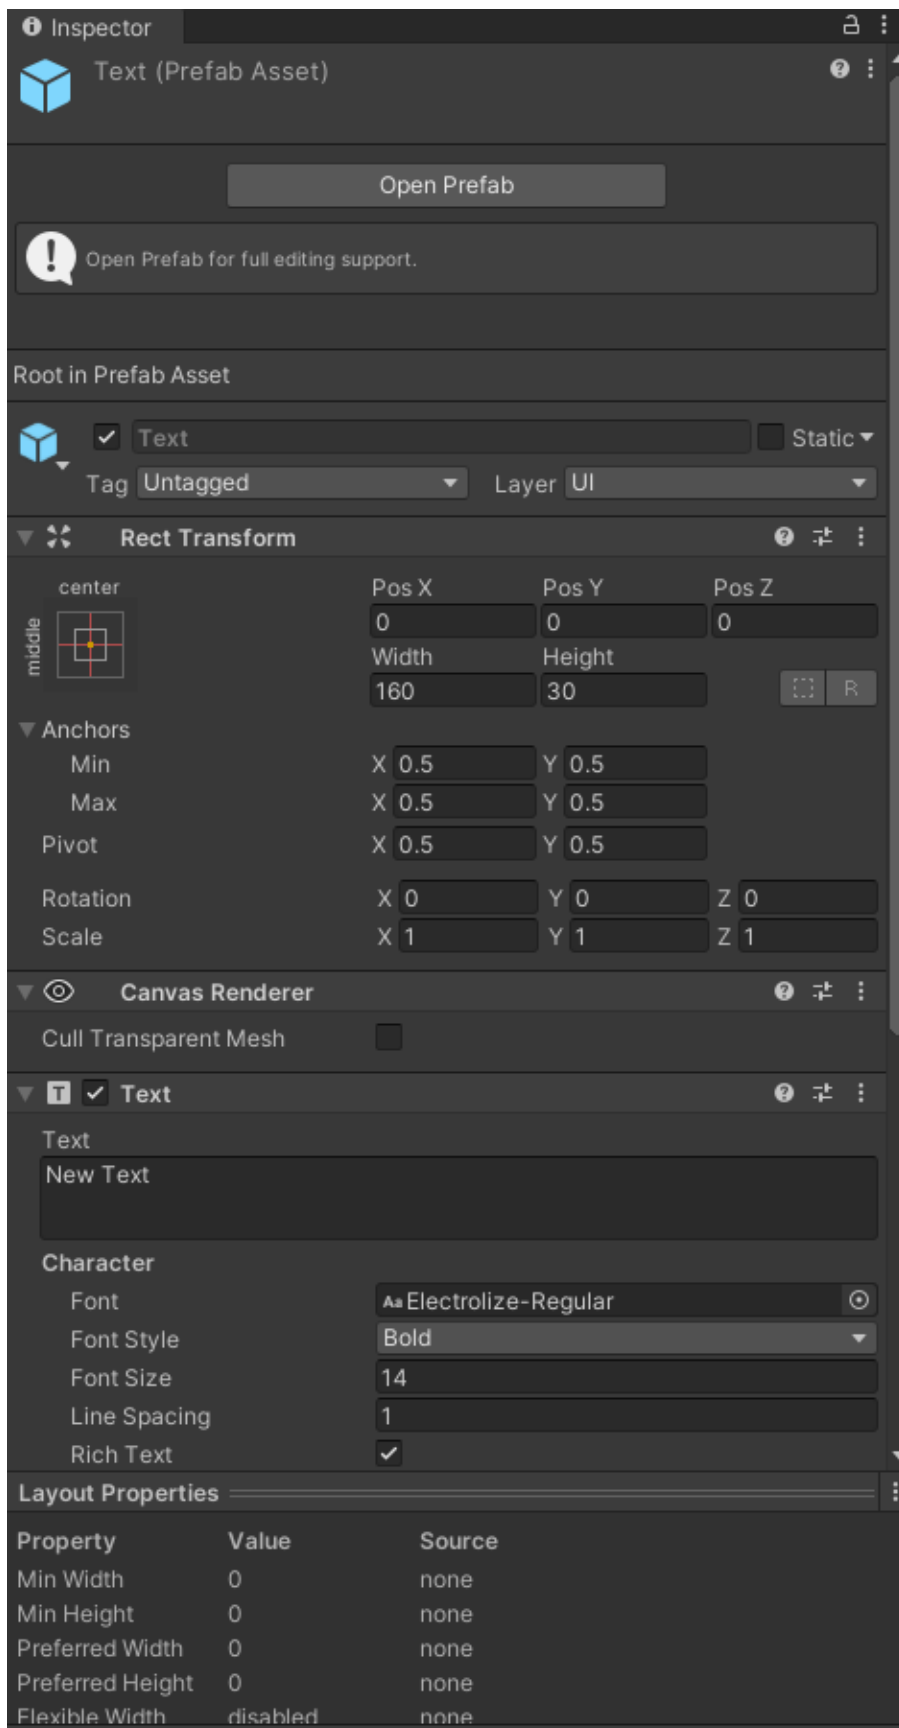

Example is how to use it:

```
StartCoroutine (getPlayerisExist ("Adrian"));
```

## USEFUL TIPS

1. You can change text fonts, size etc. Select Prefabs in Project Folders. Select Text in Prefabs folder.

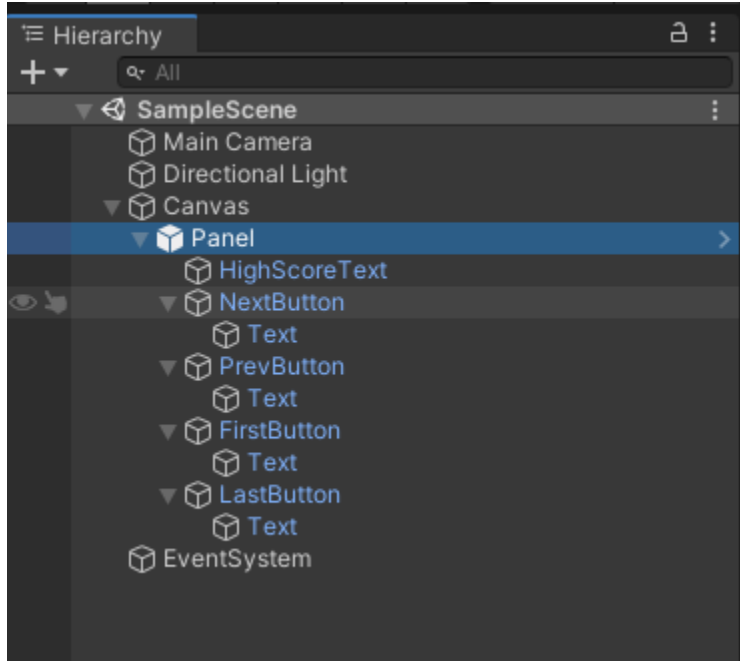

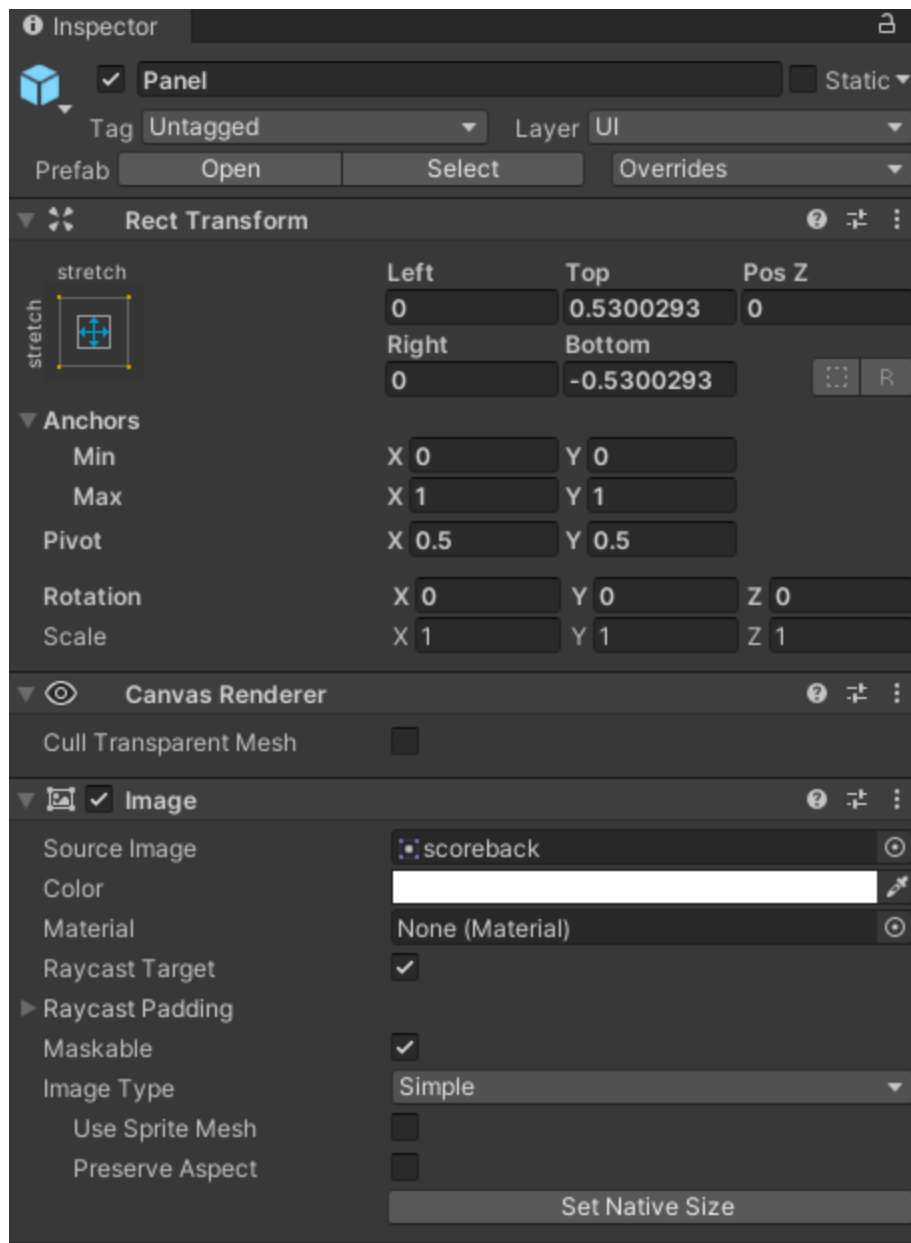

2. If you need different background, you can change source image in panel component.

Select "Panel" in the Hierarchy panel then change Source Image in Inspector panel.

## CONTACT
